**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all

obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 1-35 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nappholz et al. (US 5,183,040). Nappholz teaches an ultrasound system suitable for measuring cardiac output of a patient's heart (see cols. 4-6) comprising the steps or structures for advancing the electrode to the proximity of the upper left ventricle (see Figs. 4-5); placing an ultrasound

Art Unit: 3737

catheter (73) comprising at least one transducer utilizing piezoelectric properties to generate acoustic signals from electrical signals; and attaching the electrode to the desired position.

Nappholz fails to mention specifically that the ultrasound catheter is also used for imaging the area of the patient's heart. However, it is well known in the art of ultrasound imaging and diagnostic system to use ultrasound catheter for imaging purposes as well as therapeutic purposes depending on the setting of frequencies of the piezoelectric transducer.

Sharp teaches an ultrasound catheter that is used for imaging a patient's heart.

Therefore, it would have been obvious to an ordinary skill in the art, at the time the invention was made to modify Nappholz's ultrasound catheter system such that it can be used as imaging purposes also according to the teachings of Sharp so that accurate placement of the electrode near the patient's heart can be achieved.
